

## SDL for Education and Cyber Range Training

Software Defined Labs or SDL™ simplifies lab management and improves remote access for the best learning experience.

Create network topologies or cyber simulation environments for training and testing from physical and virtual infrastructure with ease.

### Provide Every Student and Trainee Access

SDL provides automated setup and provisioning of network environments for educational and training purposes.

### Centralized reporting and tracking

Administer network resources and sandbox environments and provide real-time support to students and trainees.

### On-demand Access

On-demand activation and automated provisioning of physical and virtualized environments. SDL will spin up VMs when you need them and lock down physical devices when they are in use.

### Auto-Revert Sandboxes

Quickly roll back devices to default states. Students can experiment without the fear of destroying configurations or topologies.
